& R&M

THE ANALYSIS

Vehicle overview

Taking a closer look at the specifications of your current fleet

Operational analysis

Creating route simulations & range estimations

Energy analysis

Taking infrastructure, vehicle & system energy needs & losses into consideration

Charging analysis

Identifying the charging infrastructure needed & finding strategic locations

SELECTING CHARGING HARDWARE

Selecting the best
hardware

Power availability
& compatibility

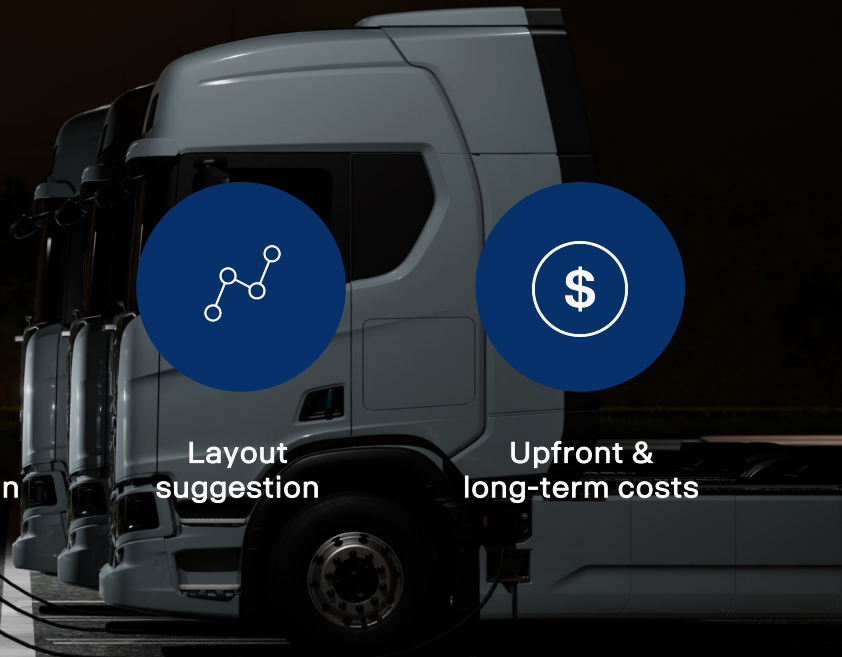

Preparing for
future expansion

Layout
suggestion

Upfront &
long-term costs

SELECTING CHARGING SOFTWARE

Selecting best
Charging Management
System for needs

Set up dashboards
& charging schedules

Set up
payment system

Train the customer how
to use the systems

INSTALLATION & COMMISSIONING

Assessing the sites,
infrastructure & grid

Preparing sites
& teams

Performing
groundwork

Installation &
commissioning

SUPPORT, REPAIR & MAINTENANCE

Service level agreement

Repair and
maintenance contract

Local &
remote support

Back-up solutions

SMART CHARGING

Charging will bring another dimension to consider when planning your operations. With your Charging Management System (CMS) you will be able to charge smart.

Smart charging is important to:

- Monitor, manage & restrict
- Keep your batteries in the best condition
- Secure uptime by scheduling charging
- Reduce your infrastructure investments
- Secure peak energy capacity to optimise usage
- Charge when prices are low to reduce costs
- Share data with other systems
- Optimise energy consumption

Your CMS handles all of the above, and we'll set it up for you and ensure it runs smoothly.
