

ENVIRONMENTAL POLICY

Scania is a world-leading provider of transport solutions, including trucks and buses for heavy transport applications combined with product-related service offering. Scania is also a leading provider of industrial and marine engines.

Scania's purpose is to drive the shift towards a sustainable transport system, creating a world of mobility that is better for business, society and the environment. We believe that the demand for sustainable transport is shaped by the needs of people and society in line with the UN's Agenda 2030 and Sustainable Development Goals. As a signee to UN Global Compact, Scania is committed to upholding the 10 principles in the areas of environment, human rights, labour rights and anti-corruption.

At Scania we view these global goals as a shared agenda to invest in our planet and society. This requires collaboration across government, business and the wider civil society.

Our strategic work is dependent on understanding our impact, including the risks and opportunities along the life cycle, with the ambition of linking targets and actions with science.

A holistic approach towards sustainable transport

Our sustainable transport solutions are developed in close cooperation with our customers and other stakeholders and rest on three pillars:

- Energy efficiency, the most efficient technology for our products combined with services focusing on powertrain performance, vehicle optimisation and fuel consumption.
- Renewable fuels and electrification, the largest variety of engines for renewable fuels and electrifications technologies for vehicles and infrastructure.
- Smart and safe transport, through connectivity create more efficient logistical flows and greater filling rate.

Partnership is crucial for reshaping the ecosystem of transport and logistics and Scania is collaborating with society, policy makers, operators and customers.

Environmental responsibility

Environmental initiatives regarding Scania's products, processes and services are proactive and based on the precautionary principle and the life cycle perspective. We are committed to decarbonisation throughout our entire value chain and across all relevant scopes. The most prominent lever is the product portfolio as well as responsible sourcing of energy and phasing out fossil fuels in our own operation, logistic flows and in supply chain.

We aim to adopt a more circular business model, where the use of existing resources is maximised and waste is minimised all along the value chain.

With a strong focus on continuous improvements throughout our entire organisation, we ensure high quality output from environmental management in all areas. Deviations from targets and standards help us to identify and eliminate waste. In everything we do, internally as well as externally, we strive to optimise our flow and undertake initiatives for resource efficiency.

Scania strives to take environmental responsibility and work with nature along the value chain. This includes aspects related to biodiversity, improving air quality and protecting water resources.

Scania commits to compliance of legal and other applicable requirements and self-appointed environmental targets. We are committed to transparent reporting with the aim to provide our stakeholders with regular and relevant information about our efforts.

Our leaders demonstrate environmental priorities in words and in actions as well as commitment to requirements. Awareness and engagement of our highly skilled employees enables us to take our responsibility and to drive the shift.
