The listed phone models are tested for Bluetooth connection to Scania Radio Infotainment System. In the tests, the results varied between different brands and models, and the list should be seen as a help in selecting a mobile phone model. The list is not complete for all phones on the market, but consists of a selection of phone models. If a phone model is not listed it can still work with the radio. Because the electronics of mobile phones is constantly changing Scania cannot, despite the tests, ensure the tested features of the listed models.

- Features works but with deviations
- Features works
- Features is not working
- Feature not supported by phone

Note that only the phonebook entries stored on the mobile phone's SIM card, which can be transferred to the radio. The mobile phone's manual for instructions on where items are stored and how they can be copied or moved to the SIM card. This operation can be done on some phones.
