### Standard equipment
- Scania Engine Management System, EMS
- Extra high pressure fuel injection system, XPI
- Turbocharger (VGT)
- Fuel filter and extra pre-filter with water separator
- Fuel heater
- Oil filter, full flow
- Centrifugal oil cleaner
- Oil cooler, integrated in block
- Oil filler, in valve cover
- Deep front oil sump
- Oil dipstick, in block
- Magnetic drain plug for oil draining
- Starter, 1-pole 6.0 kW
- Alternator, 1-pole 100A
- Flywheel, for use with friction clutch
- Silumin flywheel housing, SAE 1 flange
- Front-mounted engine brackets
- SCR system
- EGR system
- Open crankcase ventilation
- Operator's manual

### Optional equipment
- Cooling package
- Puller and pusher fans
- Fan ring with sealing
- Hydraulic pump
- Air compressor
- AC compressor
- Side-mounted PTO
- Front-mounted PTO
- Exhaust connections
- Electrical base system
- Control and instrument panels
- Accelerator position sensor
- Engine heater
- Flywheels: SAE11.5", SAE14", DANA15/16", ZF WG260
- Stiff rubber engine suspension
- Air cleaner
- Closed crankcase ventilation
- Studs in flywheel housing
- External thermostat for extra oil cooler
- Low coolant level reaction
- Variable idle speed setting
- Low oil sump
- Oil level sensor

---

### DC13 087A. 283 kW (385 hp)

**EU Stage IV, US Tier 4f**

The industrial engines from Scania are based on a robust design with a strength optimised cylinder block containing wet cylinder liners that can easily be exchanged. Individual cylinder heads with 4 valves per cylinder promote repairability and fuel economy.

The engine is equipped with a Scania developed Engine Management System, EMS, in order to ensure the control of all aspects related to engine performance.

The injection system is Scania’s XPI (Extra High Pressure Injection), a common rail system that in combination with SCR (Selective Catalytic Reduction) and EGR (Exhaust Gas Recirculation) gives low exhaust emissions with good fuel economy and a high torque. The engine can be fitted with many accessories such as air cleaners, silencers, PTOs and flywheels in order to suit a variety of installations.

**ICFN – Continuous service:** Rated output available 1/1 h.

Unlimited h/year service time at a load factor of 100%.

**Note!**

The fuel consumption values are valid when the engine uses fully warm after treatment system and in warm conditions. Fuel efficiency will be reduced during warm up and with colder ambient temperature, especially in combination with un-efficient thermal insulation of after treatment system.

This specification may be revised without notice.

Output vs rpm

Torque

Spec fuel and reductant consumption

Test conditions: Air temperature +25°C, Barometric pressure 1013 hPa (760 mmHg), Humidity 30%, Diesel fuel acc. to ECE R 24 Annex 6. Density of fuel 0.840 kg/dm³. Viscosity of fuel 3.0 cSt at 40°C. Energy value 42700 kJ/kg.

Power test code: ISO 3046. Power and fuel values +/-1%.
SCR system
EU Stage IV, US Tier 4f

SCR (Selective Catalytic Reduction) technology is used on Scania’s engines for EU Stage IV and US Tier 4f to reduce the NOX content in the exhaust gases. A chemical process is started by injecting reductant, an urea and water mixture, into the exhaust gas stream. During injection the water evaporates and the urea breaks down to form ammonia. The ammonia then reacts with the nitrogen gases in the catalytic converter and forms harmless products such as nitrogen gas and water. Through the use of SCR the exhaust gases are purged of poisonous levels of NOX in the best possible way. Scania is making use of a system that is carefully developed and tested in our own laboratory.

The reductant tank is available in different sizes and is heated by the engine’s cooling system in order to avoid freezing of the urea solution; urea freezes at -11°C. The tank and a pump module are delivered as a unit which is fitted to brackets for an easy installation. The Scania system contains all mechanical and electrical parts needed except from the exhaust piping which is to be adapted according to the customers installation.

### Mechanical system

- 1 Evaporator module
- 2 Reductant pressure line 2.5 m, 4 m, 5 m, 6.5 m
- 3 Coolant hose for tank and pump heating
- 4 Coolant valve
- 5 Reductant fluid return line 2.5 m, 4 m, 5 m, 6.5 m
- 6 Reductant tank 38 l, 45 l, 60 l, 63 l, 70 l
- 7 Coolant hose, return from tank and pump heating
- 8 NOx sensor with control unit
- 9 Oxidation catalytic converter\(^1\) Engine-mounted, Separately
- 10 Temperature sensor
- 11 SCR catalyst
- 12 NOx sensor with control unit

### Electric system

- 1 Customer interface, SCR system
- 2 between engine and SCR control unit 3 m, 4.5 m, 6 m
- 3 NOx sensor electrical cable 3 m, 4.5 m, 6 m
- 4 Electrical interface, SCR system
- 5 Reductant doser electrical cable 3 m, 4.5 m, 6 m
- 6 Temperature sensor electrical cable 3 m, 4.5 m, 6 m, 9 m
- 7 NOx sensor electrical cable 3 m, 4.5 m, 6 m, 9 m
