

DC13 071A. 325-371 kW (366-411 kVA)

EU Stage IIIA, China Phase III and CPCB-II

The power generation engines from Scania are based on a robust design with a strength-optimized cylinder block containing wet cylinder liners, which can easily be exchanged. Individual cylinder heads with 4 valves per cylinder promotes reparability and fuel economy.

The engine is equipped with a Scania-developed Engine Management System, EMS, to ensure control of all aspects related to engine performance. The injection system is based on electronically controlled unit injectors, which gives low exhaust emissions with good fuel economy and a high torque.

For further reduction of NOx emissions, the engines are also equipped with an exhaust gas recirculation (EGR) system, developed by Scania. The engine can be fitted with many options such as air cleaners, PTOs and cooling package, to suit a variety of installations.
