A NEW URBAN GENERATION
SOLUTIONS FOR THE ONLY CITY THAT MATTERS. YOURS.

Your operation is an important part of the urban eco-system enabling the everyday life of thousands of people. As cities grow bigger, so does the urge for smart transport solutions. Luckily, being smart is kind of our thing.

While some operations are defined by what they carry, we know that you must be one with your surroundings. Just as your business is unique, so too is the city you operate in. That is why we tailor solutions to meet the needs of our customers. Optimising them to meet the emission requirements of Paris, the safety restrictions of London or simply to avoid the traffic and congestion on the narrow streets of Rome.

With products such as the new L-series, the urban P-series and the Scania CrewCab, the 7-litre diesel engine and the 9- and 13-litre gas engines, the new urban vehicle generation is sure to master any mission.

Ultimately, it is built for the only business that matters. Yours.
The time has finally come for our new generation trucks and services entirely dedicated to taking on the challenges of urban operations. With new products such as the L, P- and G-series, the Scania CrewCab and the 7-litre engine, the updated 9-litre and the new 13-litre gas engine, this generation is the true metropolitan of our family. No matter if you are putting out a fire, collecting waste or distributing goods, we stand ready to tailor a solution suitable for your needs.

Cutting unnecessary workshop hours and securing safety and environmental standards, creating value far beyond the initial price tag along the way.

MEET THE URBAN RANGE
THE TAILORED SOLUTION

In terms of finding the perfect fit, our well-known modular system and smart services have always been our biggest assets. Combining strength with smartness is simply our way of doing business. That is how you get to be the one setting new urban standards, instead of settling for them.

Optimized Performance
Our modular system turns every part of your vehicle into an optimised one. It enables us to make balanced decisions all the way, fine-tuning the smallest details in order to make the biggest impact on your total operating economy. It enables us to cut kilos from your vehicle, adding them to your payload instead. It gives us the opportunity to choose the right engine and the fuel to run it, lowering both your fuel costs and environmental impact. Kind of a win-win situation.

The Smart Services
Although the technical specifications matter, the result of those specifications will be even better when combined with smart services. With our connected services, you can be sure to always stay one step ahead. Not to mention our maintenance contracts with flexible plans, which set a new industry standard using real-time operational data from your vehicle to adjust service intervals specifically for your needs.
When operating in a large city like London, you can be sure to have company on the road. Not only in the form of other vehicles, but also vulnerable cyclists and pedestrians. This makes safety a top priority when you are looking for a new vehicle. With its outstanding visibility and improved braking performance, our new urban range is more than up to the job.

**Safe and Sound in London**

**New Truck Range and Safety Features**

When operating in a large city like London, you can be sure to have company on the road. Not only in the form of other vehicles, but also vulnerable cyclists and pedestrians. This makes safety a top priority when you are looking for a new vehicle. With its outstanding visibility and improved braking performance, our new urban range is more than up to the job.

**The City Safe Window**
Located low down in the passenger door, the heated City Safe Window will considerably improve the driver's direct vision, offering a clear view of what's going on alongside the vehicle. Available for the B- and L-series, it provides outstanding direct visibility, reducing the risk of damage and accidents while enabling more efficient driving without compromising safety.

**Visibility**
Designed for urban operations, our new cab range offers great visibility. The lowered dashboard, improved driver's position and low window sills give the driver outstanding direct visibility. As do the maximised windshields and compact mirror housings.

**L-series**
Our new L-series cab puts you on the same level as the other vehicles travelling the city streets. This compact yet spacious cab sits low and far forward on the chassis with the engine tunnel out of the way, enabling outstanding cross-cab access and visibility. With its lower entry it is designed to minimise strain on your driver's knees and arms too.

**Camera System**
When operating in urban environments, anything that helps reduce blind spots to boost safety is good news. The front, rear, and corner eye camera system will provide your driver with a set of extra eyes. Adding a supplementary camera from the Scania Vehicle Accessories range will enhance visibility even further, providing you with a 360-degree view.

**Brake Performance**
We take great pride in making your vehicle as smart and safe as possible. Take the Electric Parking Brake for example, which offers automatic braking when opening the cab door.

**Scania Driver Training – Focus on Safety**
The driver is one of the most important safety assets in the urban operation. Training drivers to carry out the mission in the safest way is therefore a good investment. At Scania, we offer a series of driver training programmes with different focus areas, safety being one of them.
While some operators have the luxury of spacious roads, you battle the challenge of the narrow streets and crowded city centre in Rome. Your job sets high demands on manoeuvrability as well as planning in order to avoid traffic and congestion. With Scania you get the advantages of a vehicle tailored for its task, as well as smart services that support your driver.

**Fleet Management System**
In a crowded city, connectivity will take you far. The Scania Fleet Management Systems will guide your drivers on their way, enabling instant messaging through their infotainment systems. Alert them to avoid congestion, and send information about the road ahead to keep your wheels turning even on the busiest of streets.

**Handling and Steering**
Ultimately, your drivers are your most important assets in terms of safety. Supporting them with class-leading handling and stability is one of our top priorities. Our new tag axle system offers a number of advantages, such as the EST, Electro-hydraulic power Steered Tag Axle, which enables tighter turning and less tyre wear when manoeuvring.

**Scania Opticruise**
The new and improved Scania Opticruise will not only relieve your driver of all gear-changing while driving, it will save fuel while doing so. The new gear-changing strategy is designed to continuously adapt to the environment by taking into account factors such as road gradient and engine characteristics.

**Scania Driver Training – Focus on Urban Driving**
Operating in urban surroundings imposes high demands on drivers. In order to support them, Scania now offers modular-based Scania Driver Training, tailored to meet the demands and challenges facing the urban driver – such as manoeuvring in narrow streets and avoiding traffic and congestion. There is also the additional option of local adjustments to meet the demands of a specific city.

**Extend Operational Hours**
A gas engine will considerably reduce noise levels. A most welcome benefit for any operators wishing to extend their operating hours and undertake night deliveries in order to avoid the city streets when they are most crowded.

**Market-leading handling and steering**
**MASTER THE BUSTLING STREETS OF ROME**
TOTAL OPERATING ECONOMY

BOOST YOUR NUMBERS IN BERLIN

Even if the streets are a bit more spacious in Berlin there is still a lot you can do to increase your productivity. Take on a bigger payload by weight-optimising your vehicle. Get an overview of your fleet, and manage it with the help of connected services. At Scania, we are all about smart solutions that take your business to the next level.

New 7-litre Engine
This launch is big news for our engine range as we welcome a new member to our family – the 7-litre engine. This six-cylinder engine available with 220, 250 and 280 hp is sure to cut both your fuel consumption and the weight of your vehicle. All while reducing both noise levels and vibrations. Most welcome news in the game of urban operations.

Maintenance with Flexible Plans
Every truck is used differently, which is why they should all be serviced individually. Our new standard for maintenance contracts uses vehicle data from the communicator to analyse when a service is needed and exactly what needs servicing. This way we are able to be proactive with regard to planning and administration, and you get to focus on what actually matters – your business and transport operation.

Fleet Care – Uptime Guarantee
With Scania Fleet Care you can focus on your core business, leaving the rest to a personal Fleet Manager who plans all service and maintenance of your fleet. The number of unplanned stops is cut to a minimum and the planned stops will be scheduled according to your personal needs. With the new optional Uptime guarantee covering all maintenance and repairs, planned and unplanned, any deviation from the agreed hours will be compensated.
With the temperature rising globally, we must keep our heads cool. That is why we are proud to offer the widest range of solutions for alternative fuels in the industry, enabling you to handle both local emissions and particle regulations such as those in Paris. In addition, the opportunity to tailor your vehicle for its specific task enables us to fine-tune even the smallest details in order for you to minimise your environmental impact.

**Starting on a clean slate in Paris**

The sustainable offer

**Alternative Fuels**

Times are changing, and so are our cities with them. Some cities are talking about banning diesels completely, others are implementing strict emissions regulations and restrictions. Our new engine range offers a series of solutions enabling you to meet those changing needs. With our engine family now extended with the 7-litre engine, the 13-litre gas engine and alternative fuels such as HVO, biogas and natural gas, running an environmentally friendly business has never been easier.

**New 13-litre Gas Engine**

With sustainability being a top priority in many cities, we are very proud to present our new 13-litre, six-cylinder gas engine, available with 340 hp, and exclusive to the C- and R-series with the option of either the Scania Opticruise gearbox or automatic transmission. Choosing to run on biogas not only reduces your CO2 emissions by up to 90%, it cuts your noise emissions too, enabling longer operating hours.

**Updated 9-litre Gas Engine**

Our updated 9-litre gas engine, available with 280 and 340 hp, offers power in a compact shell, is extended by your significant weight reduction compared with the 13-litre engine, enabling you to add a little extra to your payload without compromising your performance.

**Scania Driver Training – Focus on Environmental Driving**

The driver is one of your most important assets for cutting fuel consumption and minimising your environmental impact. At Scania we offer a series of Driver Training programmes with different focus areas, environmental driving being one of them.

**Autostop**

A powerful engine knows when to keep quiet. With the autostop function you can rest assured no energy goes to waste, with the engine stopping automatically when the vehicle is not driving. An upside in terms of both CO2 and noise emissions.
Attracting the best drivers is key in order to run a successful urban operation, regardless of whether you are based in Madrid or any other city. At Scania, we believe the best way to succeed is to offer your drivers an outstanding office and the support of smart services along with it. With major product news for both cabs and engines, and improvements down to the smallest details, this new generation is sure to improve both the mood and the working environment of your drivers.

**On the Roll in Madrid**

**Ergonomics**
This generation comes with a series of new features and improvements to support the driver. Such as the relocated driver position and lowered dashboard, offering improved direct visibility as well as a more ergonomically working position.

**The Urban P-series**
The new urban P-series cab with its lower tunnel is a great choice when operating in dense traffic and needing access for entry and exit through the passenger door. The 7-liter engine makes the engine tunnel 95 mm lower than in a regular P-series cab, improving cross-cab access and resulting in a more spacious interior feel.

**Scania CrewCab**
The rear doors of the new Scania CrewCab come with long yellow grab handles on the inside. They feature several stop catches and open to a full 85 degrees, its stationery-like boarding comes with either fixed or retractable lower step, making for quick and safe entry and exit. Inside the crew cab offers a variety of seating and storage possibilities, separate climate system and lighting solutions.

**Storage Facilities**
Working long hours as your drivers do, they may need to bring along additional equipment, both personal and work-related. Either way, our cabs are equipped with smart storage facilities enabling them to stock up without the cab feeling cramped.

**Additional Passenger Seats**
For maximum efficiency, some operations require a small crew on board. Most regular cabs don't offer the option of extra seating, but our new L-series is anything but regular. Designed with an optional fitting, two passenger seats in the middle of the cab, it allows up to three passengers to come along comfortably.

**Easy Access**
Anyone who needs to get in and out of the cab more than once per day will appreciate an easy climb and a low cab floor. The new Scania’s opposite is exceptional in this respect. It not only provides easy one- or two-step access, but also features kneeling as standard on the one-step version. This is also available as an option on the two-step version, meaning the front air suspension drops by 100 mm as soon as the driver applies the parking brake.
When tailoring a solution uniquely for you, we need to get to know your operation. Our way of doing business has always been characterised by close relationships with our customers. So let’s meet. Let’s turn your numbers around, cutting costs and increasing revenues.

Let’s tailor a solution for the only city that matters. Yours.
