

# SERVICES 360

## Maximising your operation

Services 360 is Scania's approach to making service selection simple, clear, and easy to navigate for operators. It offers a range of package options that can be tailored to different business and operational priorities, all with a shared purpose: to align with your business strategy and day-to-day needs in a way that delivers the best possible value. Available across Australia, Services 360 includes Scania's digital tools and services designed to simplify operations and reduce the time spent on manual tasks. Each package provides a different level of support for productivity management, allowing you to choose the level of cost certainty and operational support that best suits your business. All with a clear focus on maximising uptime and productivity.

# THE VALUE OF THE RIGHT SERVICES SETUP

In terms of finding the right services selection – aside from supporting your profitability and minimising unneeded manual administrative work, it all comes down to financial and productivity management. No matter if you have built your business strategy on having comprehensive workshop facilities in-house, or if you prefer to outsource every aspect of your vehicle infrastructure maintenance and upkeep.

## Tailored to you

Although our services packages follow a simple structure, each building and adding on one another – we consider them a starting point. If a package fits your needs as is – that's great – but with each package, you naturally have a choice to tailor it further to your needs or prerequisites with options and add-on services.
