

SCANIA DATA ACCESS

Ensure that you have a complete fleet overview – without the need for retrofitted hardware. Our monthly subscription services provide direct access to rFMS standardised data from all your Scania vehicles, for integration in fleet management systems or other types of systems outside of the Scania digital ecosystem.

SCANIA DATA ACCESS

The optimal solution for focus and control over mixed fleets with vehicles from multiple manufacturers.

With our subscription services, all your Scania vehicle data is formatted according to the rFMS standard and is provided via direct server-to-server API access. The data can as such be visualised in any compatible system with API integration – allowing for more focused fleet management with greater control and efficiency centred around a single system of choice.

The service is fast and easy to activate or deactivate – which makes it easy to track even rented Scania vehicles for limited time periods. Without the need for costly retrofitting and the associated workshop downtime, productivity is also maintained – making it an economical choice in more than one way compared to hardware based solutions.

The Data Access subscription is available in three variations: Service planning, Location and Performance.

Quick facts

- Choose between three subscriptions.
- Service planning subscription covers: Vehicle data, Odometer, Dates, Schedule status, Activities, Duration.
- Location subscription covers: Specification, Odometer, Positioning, Fuel level, AdBlue level and Wheel based speed.
- Performance subscription covers: Historic data (e.g. driving time, acceleration, braking), Uptime related data and legacy APIs.
- Further information about the service subscriptions, API specifications, integration instructions and support is available in the developer portal at developer.scania.com.

Services **360** *Included in:*

PRO FULL PLUS CORE
