

SERVICES 360

Maximising your operation

Services 360 is Scania's way of making your services selection easy, clear and concise – with package options that can be tailored to a wide range of business and operational priorities, and all sharing the same goal: To align with your business strategy and operational needs in a way that provides the best possible value. That's why they are available all throughout Europe and include our digital tools and services to make your operation easier to manage, with less time spent performing manual tasks. But on top of that, each package offers a varying level of support to your productivity management, aligning with a financial risk-level for your business that you're both comfortable with and prepared for. All while maximising your productivity.

THE VALUE OF THE RIGHT SERVICES SETUP

In terms of finding the right services selection – aside from supporting your profitability and minimising unneeded manual administrative work, it all comes down to financial and productivity risk management. No matter if you have built your business strategy on having comprehensive workshop facilities in-house, or if you prefer to outsource every aspect of your vehicle infrastructure maintenance and upkeep. Within Services 360, our packages offer everything from just the core essentials in terms of digital tools, insights and day-to-day fleet management needs, to taking complete responsibility for every nut and bolt in your fleet, 24/7.

Tailored to you

Although our services packages follow a simple structure, each building and adding on one another – we consider them a starting point. If a package fits your needs as is – that's great – but with each package, you naturally have a choice to tailor it further to your needs or prerequisites with options and add-on services.
